Description
CA-26 Floor Wax is an acrylic based wax that helps restore the sheen of interior floors while also providing a slip and scuff resistant surface. CA-26 is easy to apply and is a non-toxic product that dries fast and is easy to recoat, leaving your floor with a semi-gloss finish.

Uses
CA-26 is primarily used to restore the sheen of interior floors coated with epoxy, polyurethanes or polyaspartics and most waxable surfaces.

Advantages
Easy to Mix • Scuff Resistant • Non-Hazardous • Environmentally Friendly • Durable • Fast Drying • Easy to Recoat • Can be Buffed

Inspection
The area to be waxed should be clean, dry and free of debris or contaminates. When recoating comparable floor waxes, always test a small area to ensure compatibility.

Preparation
On previously waxed floors, strip existing sealers, waxes and finishes. For best results, use a floor machine with stripping pad. Strip build up along edges and in corners. Rinse the stripper thoroughly, so that no residue remains on the floor.

Mixing
Gently shake container, prior to use.

Coverage
Coverage will vary depending on the texture of the surface to be waxed, but approximately 2000 to 3000 square feet per gallon.
Application
Floor must be completely dry before applying CA-26. On unwaxed surfaces, apply 2-4 thin coats, using a mop, lambs wool applicator or microfiber pad. For best results, material can be sprayed lightly onto the surface with a pump-style sprayer and evenly applied with a microfiber pad. On previously waxed surfaces, 1 to 2 coats may be adequate, depending on gloss and build desired. Avoid building up excessive layers of wax, as this may create a dull or muddy appearance.

Dry Time
Depending on conditions, allow CA-26 to dry for 30 minutes between coats.

Clean Up
Uncured material can be removed with soap and warm water.

Limitations
• This product is designed for professional use only.
• Store material between 40°F and 90°F.
• Do not pour unused material back into original container.
• Read and obey all warnings.
• Do not allow any Westcoat products to freeze.

Health Precautions
Inhalation of vapor or mist can cause headache, nausea irritation of nose, throat, and lungs. Avoid breathing vapors, it is strongly recommended that respirators are worn. Prolonged or repeated skin contact can cause slight skin irritation. All epoxies have the potential of causing skin irritations or allergic reactions. Be careful not to get on skin, clothes or in eyes. Gloves are strongly recommended. If splashed in the eye, flush with warm water and contact a physician if blurring persists.
