Custom Systems consist of the material described in Section 4.3.

3.2 Materials:

3.2.1 Plywood Substrate: Plywood substrates must be exterior grade, 5/16-inch-thick (15.9 mm) plywood complying with U.S. DOC PS-1 or PS-2.

3.2.2 Metal Lath: The metal lath must be 2.5 lb/yd² (1.36 kg/m²), hot-dipped galvanized, expanded metal lath, complying with ASTM C847. The Westcoat part number is WP-25 Metal Lath.

3.2.3 Staples: Staples must be corrosion-resistant, minimum No. 16 gauge staples with 1-inch-wide (25 mm) crowns and 5/16-inch-long (15.9 mm) legs, complying with ASTM F1667. The Westcoat part number is WP-10 Staples.

3.2.4 WP-40 Sheet Membrane: The WP-40 Sheet Membrane is a self-adhering, nominally 40-mil-thick [0.04 inch (1.02 mm)] membrane recognized in ESR-3585.

3.2.5 WP-47H Fiberlath: For use with ALX Pro Standard and ALX Pro Custom Systems only: WP-47H Fiberlath is a glass fiber lath reinforcing mesh with 5.4 inch warp and 6 inch weft hurn leno weave with a nominal 0.019-inch thickness (0.48 mm) and a nominal weight of 5.8 ounces/square yard (195 g/m²). The product comes in rolls measuring 38 inches (965 mm) wide by 150 feet (45.7 m) in length.

3.2.6 WP-81 Cement Modifier: The WP-81 Cement Modifier is a liquid admixture that is used with TC-1 Basecoat Cement, TC-2 Smooth Texture Cement, TC-3 Medium Texture Cement, and TC-5 Grout Texture Cement. Shelf life is two years when stored at temperatures between 40°F and 100°F (4.4°C and 37.8°C) and in a dry place.

3.2.7 WP-90 Waterproofing Resin: For use with ALX Pro Standard and ALX Pro Custom Systems only: The WP-90 Waterproofing Resin is a blend of acrylic resins that are formulated to be used as an admixture with TC-1 Basecoat Cement. Shelf life is two years when stored at temperatures between 40°F and 100°F (4.4°C and 37.8°C) in a dry place.

3.2.8 TC-1 Basecoat Cement: The TC-1 Basecoat Cement is a proprietary dry-blend mixture including portland cement and silica sand. The product is packaged in 50-pound (22.5 kg) bags. Shelf life is one year when stored in dry conditions.

3.2.9 TC-2 Smooth Texture Cement: The TC-2 Smooth Texture Cement is a proprietary dry-blend mixture including portland cement and silica sand. The product is
4.1.3 Metal Lath: The metal lath, as described in Section 3.2.2, must be installed with lath edges parallel to plywood substrate joints and offset from the substrate joints by a minimum of 2 inches (51 mm). The lath must be held back 1/2 inch (12.7 mm) from all deck edges and stapled to the plywood substrate with no less than 16 staples per square foot (74 staples per square meter). Lath must be snapped 1 to 2 inches (25 to 51 mm) at seams and stapled to the plywood substrate every 1 to 2 inches (25.4 to 50.8 mm).

4.1.4 Base Coat: The base coat mixture consists of one 50-pound (22.5 kg) bag of TC-1 Basecoat Cement combined with 1/4 gallons (4.73 L) of WP-81 Cement Modifier and up to 1 quart of water (946.4 mL), then mixed until uniform consistency is achieved. The mixture results in a 4.5-gallon (17 L) batch. The base coat mixture must be applied onto the lath at a rate of 40 square feet (3.7 square meters) per 4.5-gallon (17 L) batch. The minimum dry thickness of the base coat must be 0.142 inch (3.6 mm). Prior to the application of the slurry coat, the base coat must be smoothed with a trowel and allowed to cure until firm.

4.1.5 ALX Pro Standard and ALX Pro Custom Systems (Optional): To upgrade from the ALX Standard or ALX Custom System to the ALX Pro Standard or ALX Pro Custom System, lay out WP-47H Fiberlath reinforcing mesh on the dried Base Coat (applied as specified in Section 4.1.4 of this report) overlapping the seams approximately 2 inches (51 mm). Combine one bag of TC-1 Basecoat Cement with 5 gallons of WP-90 Waterproofing Resin. Mix with a mechanical mixer until uniform. Pour the mixture onto the WP-47H Fiberlath, trowel thin and smooth at an approximate coverage rate of 225 to 250 square feet (20.9 to 23.2 m²) per batch. Use a paintbrush to spread the base coat on the flashing, making sure to get the mixture into the seams and corners. Using a brush, wet with water and feather all outside edges. Allow surface to dry for 1-4 hours at 70°F (21.1°C). Scrape off any high spots or ridges that may inhibit application of a smooth texture coat. Trim any mesh that is showing on perimeters after the material has hardened.

4.1.6 Slurry Coat: The slurry coat mixture consists of one bag of TC-1 Basecoat Cement, 1 gallon (3.78 L) of WP-81 Cement Modifier, and up to 1/2 gallon (1.89 L) of water, mixed until uniform consistency is achieved. The slurry coat mixture must be applied onto the cured base coat at a rate of 100 to 150 square feet (9.3 to 13.9 m²) per 4.5-gallon (17.0 L) batch, to result in a minimum dry thickness of the slurry coat of 0.063 inch (1.60 mm). The slurry coat must be smoothed with a trowel and allowed to cure until firm.

4.2 ALX Standard and ALX Pro Standard Systems (Following installation in accordance with Section 4.1):

4.2.1 Texture Coat: The texture coat mixture consists of one bag of TC-3 Medium Texture Cement, 1 gallon (3.78L) of WP-81 Cement Modifier and up to 1/2 gallon (1.89 L) of water, mixed until uniform consistency is achieved. The texture coat must be applied with a hopper gun onto the slurry coat at a rate of 150 to 200 square feet (13.9 to 18.6 m²) per batch, to result in a minimum dry thickness of 0.047 inch (1.2 mm). The texture coat must be leveled with a trowel and allowed to cure until firm.

4.2.2 Top Coat: The SC-10 Acrylic Topcoat must be applied over the cured texture coat with a roller in one or two applications, for a total coverage rate of 125 square feet per gallon (3.04 m²/L), to a minimum thickness of 6 mils (0.152 mm). The coating must be allowed to cure until dry.
4.3 ALX Custom and ALX Pro Custom Systems
(Following installation in accordance with Section 4.1):

4.3.1 Grout Coat: The grout coat mixture consists of one 50-pound (22.5 kg) bag of TC-5 Grout Texture Cement combined with 1 gallon (3.78 L) of WP-81, and up to 1/2 gallon (1.89 L) of water, then mixed until uniform consistency is achieved. The mixture results in a 4.5-gallon (3.78 L) batch. The grout coat mixture must be applied onto the slurry coat at a rate of 150 to 200 square feet (13.9 to 18.6 m²) per 4.5 gallon (17.0 L) batch. The minimum dry thickness of the grout coat must be 0.047 inch (1.2 mm). Prior to application of the texture coat, the grout coat must be smoothed with a trowel and allowed to cure until firm.

4.3.2 Texture Coat: The texture coat mixture consists of one bag of TC-2 Smooth Texture Cement combined with 1 gallon (3.78 L) of WP-81 Cement Modifier and up to 1/2 gallon (1.89 L) of water mixed until uniform consistency is achieved. Up to 4 ounces (0.118 L) of TC-40 Liquid Colorant may be added and mixed until color is uniform. The mixture results in a 4.5-gallon (17.0 L) batch. The color coat mixture must be applied onto the grout coat at a rate of 150 to 200 square feet (13.9 to 18.6 m²) per 4.5-gallon (17.0 L) batch. The minimum dry thickness of the texture coat must be 0.047 inch (1.2 mm). Prior to the application of the stain, the texture coat must be smoothed with a trowel and allowed to cure until firm.

4.3.3 Stain: SC-35 Water-Based Stain must be applied over the texture coat with a sprayer, brush, or broom at a coverage rate of 200 to 400 square feet (18.6 to 37.2 m²) per gallon (3.79 L). The SC-35 Water-Based Stain must be allowed to completely dry before application of the next coat.

4.3.4 Sealer: The top coat consists of SC-70 Acrylic Laquer Sealer that must be applied over the stain with a sprayer, brush, or roller at a rate of 200 to 300 square feet (18.6 to 27.9 m²) per gallon (3.79 L). The top coat must be allowed to cure until dry.

4.4 Class A Roof Covering over Plywood Deck:
When the Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems are applied over a minimum 1/8-inch-thick (15.9 mm) plywood substrate with all edges blocked and installed in accordance with Section 4.0 at a maximum roof slope of 1/4 inch per 1 foot (2% slope), the system provides a Class A roof classification.

4.5 One-hour Fire-resistance-rated Construction:

4.5.1 ALX Standard and ALX Custom Systems: When the Westcoat ALX Standard and ALX Custom systems are installed in accordance to Section 4.0, over 5/8-inch-thick (15.9 mm) exterior-grade plywood complying with PS-1, with nominally 2-by-8 wood joists spaced at a maximum of 16 inches (406 mm) on center, and all plywood joists blocked, the assembly can be recognized as an alternative for the double wood floor described in Item 13 of Table 721.1(3) of the 2015 IBC and 2012 IBC [Table 720.1(3) of the 2009 and 2006 IBC]. The design bending stress must be limited to 78 percent of the code prescribed design values for the wood joist.

4.5.2 ALX Pro Standard and ALX Pro Custom Systems: When the Westcoat ALX Pro Standard and ALX Pro Custom Systems are installed in accordance to Section 4.0 over 5/8-inch-thick (15.9 mm) exterior-grade plywood complying with PS-1, with nominally 2-by-10 wood joists spaced at a maximum of 16 inches (406 mm) on center, and all plywood joists blocked, the assembly can be recognized as an alternative for the double wood floor described in Item 13-1.4 of Table 721.1(3) of 2015 IBC and 2012 IBC [Table 720.1(3) of the 2009 and 2006 IBC], except that the 5/8-inch-thick Type X gypsum wallboard must be replaced with 5/8-inch-thick Type X gypsum wallboard. The design bending stress must be limited to 78 percent of the code prescribed design values for the wood joist.

4.6 Wind Resistance:
Installation must be limited to buildings with a maximum height of 40 feet (12.2 m) above grade, in Exposure B areas, with either an ultimate design wind speed of 130 mph (209 km/h) under the 2015 IBC, 2015 IRC, and 2012 IBC or a maximum 3-second-gust basic wind speed of 100 miles per hour (161 km/h) under the 2009 and 2006 IBC and the 2012, 2009 and 2006 IRC. The plywood and its attachment to support framing must be adequate to resist the required wind load.

4.7 Method of Repair:
The damaged area must be completely removed, including the base coat and lait. New metal lath must be stapled to the clean, dry substrate, and the system reapplied as described in Sections 4.1 through 4.5 of this report. If substrate damage occurs, the retention of the strength properties of the system must be investigated.

5.0 CONDITIONS OF USE
The Westcoat ALX Standard, ALX Custom, ALX Pro Standard and ALX Pro Custom Systems described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Materials must be manufactured and applied in accordance with this report, the applicable code, and the manufacturer’s published installation instructions. In the event of conflict between this report and the manufacturer’s installation instructions, this report governs.

5.2 The WP-81 Cement Modifier, WP-90 Cement Modifier, WP-47H Fiberlath, TC-1 Basecoat Cement, TC-2 Smooth Texture Cement, TC-3 Medium Texture Cement, TC-5 Grout Texture Cement, SC-10 Acrylic Topcoat, SC-35 Water-Based Stain, TC-40 Liquid Colorant and SC-70 Acrylic Lacquer Sealer products are produced under a quality control program with inspections by ICC-ES.

6.0 EVIDENCE SUBMITTED
Data in accordance with the ICC-ES Acceptance Criteria for Walking Decks (AC39), dated June 2017.

7.0 IDENTIFICATION

7.1 The WP-81 Cement Modifier, WP-90 Cement Modifier, WP-47H Fiberlath, TC-1 Basecoat Cement, TC-2 Smooth Texture Cement, TC-3 Medium Texture Cement, TC-5 Grout Texture Cement, SC-10 Acrylic Topcoat, SC-35 Water-Based Stain, TC-40 Liquid Colorant and SC-70 Acrylic Lacquer Sealer products must be labeled with the Westcoat name and address, the date of manufacture, the shelf life, and the lot number or production number. In addition to the above, the products are labeled with the ICC-ES report number (ESR-2201).

7.2 The report holder’s contact information is the following:
WESTCOAT

Section: 07 18 13—Pedestrian Traffic Coatings

REPORT HOLDER:

WESTCOAT

EVALUATION SUBJECT:

WESTCOAT ALX STANDARD, ALX CUSTOM, ALX PRO STANDARD, AND ALX PRO CUSTOM SYSTEMS

1.0 REPORT PURPOSE AND SCOPE

Purpose:
The purpose of this evaluation report supplement is to indicate that Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems, described in ICC-ES master evaluation report ESR-2201, have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:
- 2017 City of Los Angeles Building Code (LABC)
- 2017 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems, described in Sections 2.0 through 7.0 of the master evaluation report ESR-2201, comply with the LABC, and the LARC, and are subjected to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems described in this evaluation report must comply with all of the following conditions:
- All applicable sections in the master evaluation report ESR-2201.
- The design, installation, conditions of use and identification of the Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems walking deck and roof covering are in accordance with the 2015 International Building Code® (2015 IBC) provisions noted in the master evaluation report ESR-2201.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- The installation of Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems must comply with the City of Los Angeles Information Bulletin P/BC 2014-16, “Dwellings in High Wind Velocity Areas (HWA).”
- The Westcoat ALX Standard, ALX Custom, ALX Pro Standard, and ALX Pro Custom Systems have not been evaluated under the LABC Chapter 7A or the LARC Section R337 for use in the exterior design and construction of new buildings located in any Fire Hazard Severity Zone within State Responsibility Areas or any Wildland-Urban Interface Area.

This supplement expires concurrently with the evaluation report, reissued July 2020.
